airtel

SYNC

Project Udyam Digital

Speak, verify, go live: an Indian small business picks the right bundle, clears KYC and gets connected from one phone chat, in its own language.

Platform Partner unstop

Only 7.4% of SMB leads activate, and most are lost before they accept a quote

Steepest drop: needs assessed to quote accepted, only 44% get through.

17.6
days from lead to activation

3.0
calls per customer chasing status

₹15,053
acquisition cost per activation

15.2%
churn within six months

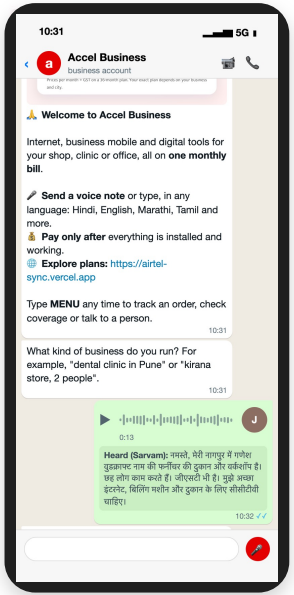

827 leads dropped because a visit never happened (owner had no time, or sales never scheduled it). A phone journey removes that step.

Q1 Start with professional offices and micro retail, fully digital; assist multi-site and factories

#	Segment	Share of leads	Activate today	Median bill	Cost per activation	6-month churn	Bundle and how we sell it
1	**Professional offices**	25%	11.1%	₹6,575	₹10,695	13.8%	Smart Office from ₹8,620/mo: fibre, backup, email, security. Self-serve.
2	**Micro retail & services**	54%	4.1%	₹2,470	₹20,007	22.7%	Dukaan Starter from ₹4,027/mo (core from ₹1,707). Self-serve only, so cost fits the bill.
3	**Small multi-site**	15%	11.0%	₹28,080	₹15,614	10.8%	Business Group from ₹33,603/mo, 4 sites, one bill. Supervisor closes.
4	**Small manufacturers**	6%	12.8%	₹15,910	₹15,324	8.1%	Factory Floor from ₹18,860/mo: leased line, IoT. Site survey first.

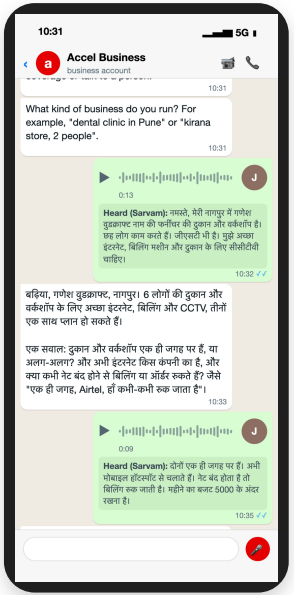

Why this order: offices convert at 11% for the lowest acquisition cost. Micro retail is half the market but loses money today (₹20k to win a ₹2.5k bill, 23% churn), so it goes only through the zero-visit journey. Prices are per month incl. GST on 36 months, with the 5% One Bill discount and no setup fee.

Q2 Needs discovery without a salesperson: a voice note in Hindi becomes a priced plan in two replies

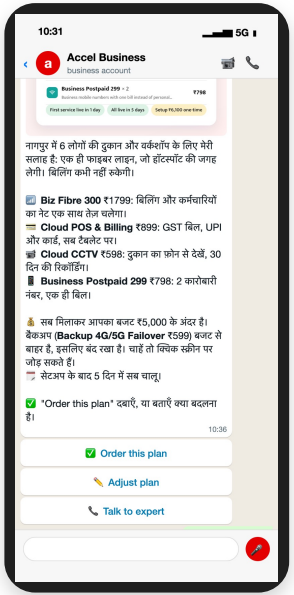

1 A voice note

Sarvam transcribes Hindi; the advisor knows the trade, city and needs

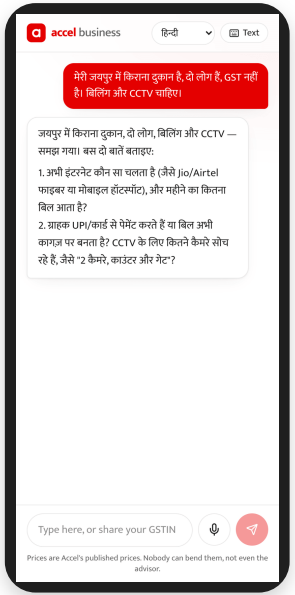

2 One or two questions

Same site? What breaks today? Budget? Answered by voice again

3 A plan with one price

Rules pick the products; ₹4,589/month incl. GST, inside the ₹5k budget

4 Same brain on the web

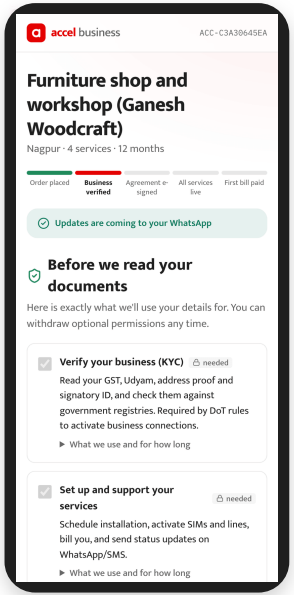

Text or mic in 10 languages; also on Telegram

Rules decide, AI explains
Products, eligibility and price come only from the catalogue CSV. The AI cannot invent a product or a price.

Never stuck
If every AI provider is down, a guided bilingual flow takes over mid-chat.

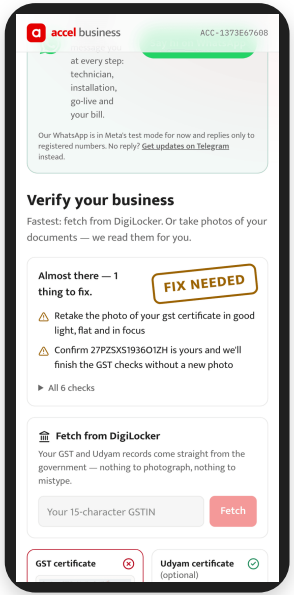

Order in one tap
On WhatsApp the sender's number is the contact: no form.

Q3 KYC in about two minutes: consent first, photos read by AI, every field checked against the registries

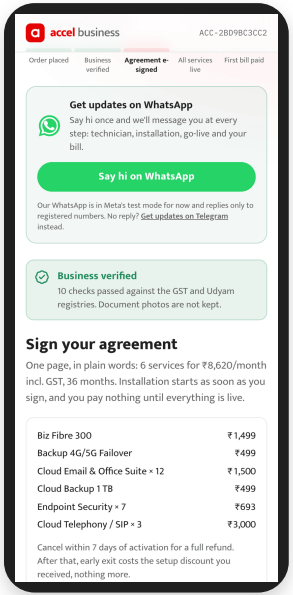

Consent first

Itemised per purpose; nothing is read before this

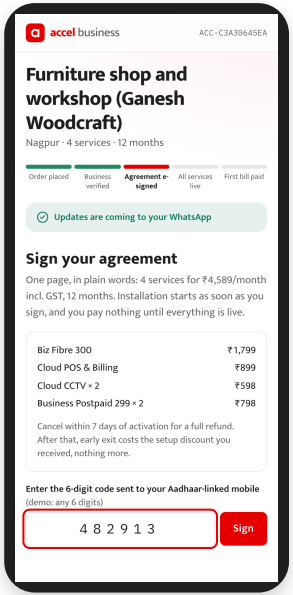

Blurred? Recovered

K04's GSTIN found in the registry by name and city

Verified

10 checks: checksum, registry, names, address age, signatory

E-sign

Aadhaar OTP on one plain-language page

DPDP Act, 2023

Consent
Per purpose, versioned, hash-chained; withdraw or erase at /privacy

Purpose limitation
Each field has one purpose; staff never see documents

Minimisation
Photos read in memory and discarded (SHA-256 kept); IDs masked

Fair
Hard fails go to a person with the reason, never a silent reject

Q4 Field force and partners pick up where the chat stops, from the same records, and get credit for digital sales

Area salesman

Calls every registration, then last quarter's best win-backs (model AUC 0.745). One tap updates the owner on WhatsApp.

Supervisor

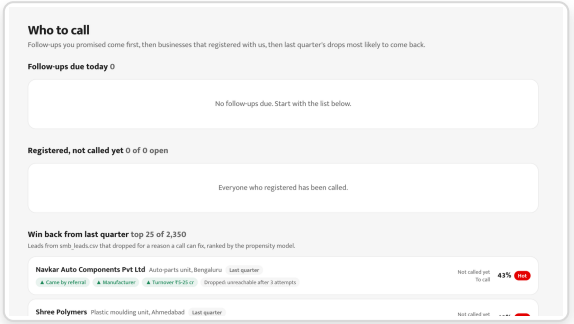

Closes multi-site and factory deals, assigns leads, sends the end-of-day report.

Manager

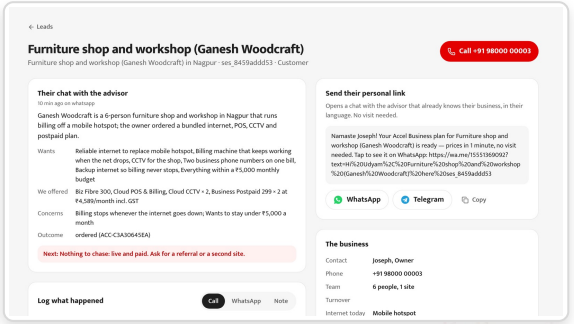

Reads reports and the five metrics; sees numbers masked.

Channel partners

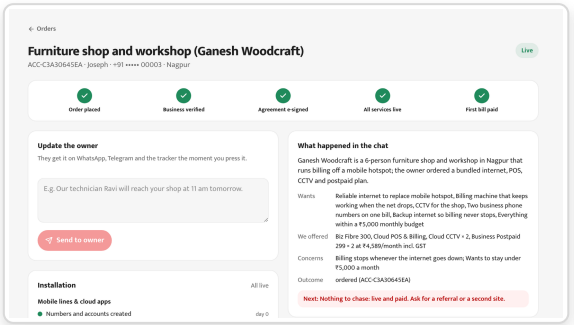

Partner code credits digital orders; install locally; hand-offs come with a chat summary.

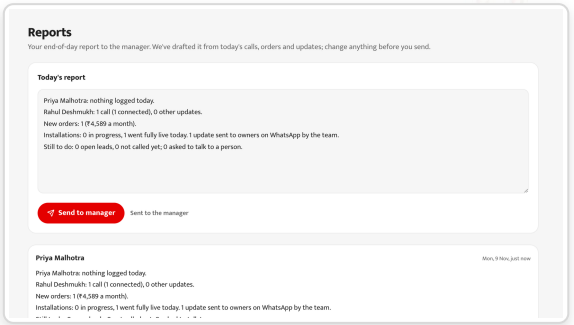

Who to call: registrations, then ranked win-backs

The lead: AI chat summary, next step, call log

Update the owner: goes to their WhatsApp

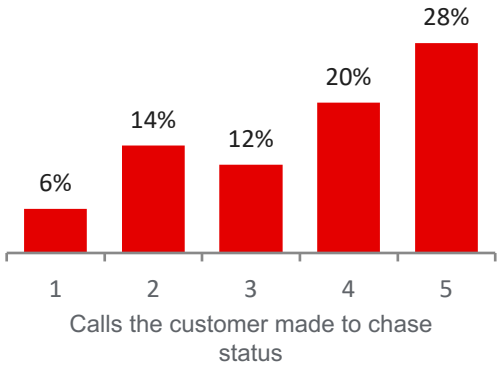

Supervisor's report, drafted from the day

Platform Partner unstop

Q5

Five numbers decide success, and the staff portal tracks every one of them live

Metric	Last quarter	Target	What moves it
Lead to activation	7.4%	**12–15%**	Self-serve quote and KYC; win-back calls
Days to first service	17.6	**1 (all live ≤ 21)**	Each service goes live on its own track
Cost per activation	₹15,053	**< ₹6,000**	No visit; people only when asked
Status chases per customer	3.0	**< 0.5**	A WhatsApp update at every step
Churn within 6 months	15.2%	**< 10%**	Fewer chases, one bill, one number

Every chase raises churn: 5.9% after one, 27.9% after five. Updates in their own chat are a retention lever, not a courtesy.

Measured, not estimated: conversations, orders, days to live and updates per order are counted on the Insights page against last quarter's baseline.

One bill the owner trusts, and a customer that costs Accel far less to win

For the owner

Pay nothing until everything is live

The first bill comes only when the last service is switched on.

No setup fee on 36 months

And the lowest monthly price for committing.

5% off for three or more services

The One Bill discount, shown line by line on the quote.

One number, updates in their chat

Technician, installation, go-live and bill, on WhatsApp.

For Accel, if activation doubles on the same leads

+370

small businesses a quarter

368 activations today become about 740 from the same 5,000 leads.

₹3.1 Cr

new recurring revenue a year from each quarter's extra customers

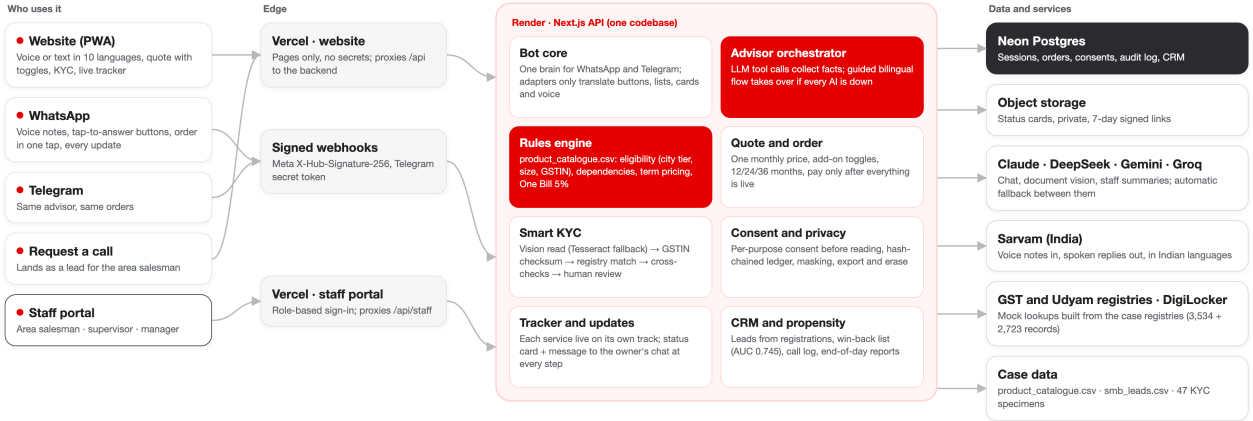

370 × the ₹6,900 median monthly bundle × 12.

₹33 lakh

saved in acquisition cost every quarter

368 activations × (₹15,053 − ₹6,000).

Built and live: one advisor brain behind every channel, rules for every price, an update at every step

The journey, end to end

1. **Speak** — Voice note in Hindi on WhatsApp
2. **Understand** — Sarvam transcribes; advisor asks 2–3 questions
3. **Price** — Rules build the bundle and the monthly price
4. **Order** — One tap; the sender's number is the contact
5. **Verify** — Consent, photos read, registries matched
6. **Sign** — Aadhaar OTP e-sign; installation starts
7. **Go live** — Every step messaged; nobody needs to call
8. **Follow up** — Salesman sees it all; manager gets the report

AI with fallbacks
Claude, DeepSeek, Gemini, Groq; Sarvam for Indian voice; guided flow if all fail

Tested
180+ automated tests, including all 12 KYC specimens

Production next
WhatsApp Business API, DigiLocker, licensed e-sign, India-hosted AI

Pilot in two cities for six weeks, scale on the numbers, with every risk designed down

Weeks 0–6 · Pilot

2 tier-2 cities, 20 partners; offices and micro retail; a control group on today's process.

Week 6 · Gate

Scale only if activation ≥ 12%, chases < 1 and cost per activation < ₹8,000.

Quarter 2 · Scale

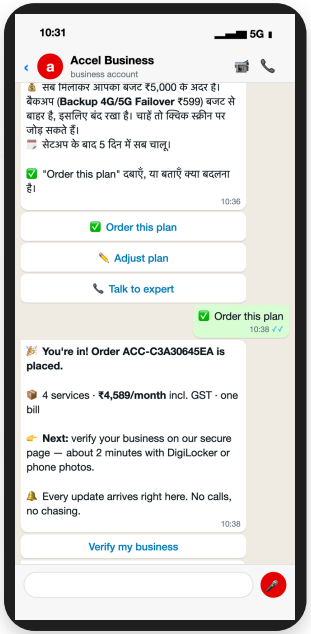

All tier-1 and tier-2 cities; multi-site assisted; factories with a site survey.

Production

WhatsApp Business API, DigiLocker, licensed e-sign, AI hosted in India.

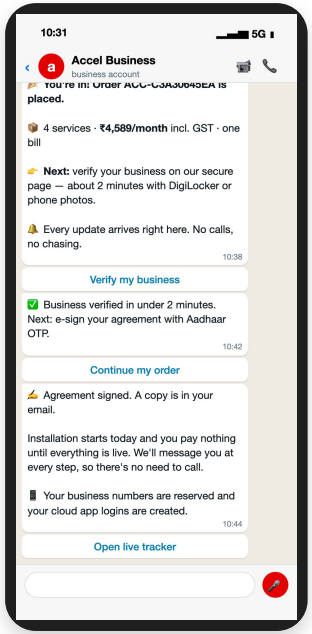

Risk	How the design handles it
The AI recommends the wrong product or price	Rules decide from the catalogue; the AI only explains, and its tool inputs are validated.
KYC passes a bad document or rejects a good one	Checksum and registry match; every hard fail goes to a person with the reason.
Partners and field sales see digital as a threat	Partner codes credit digital orders; leads are assigned, never taken.
Personal data misuse (DPDP Act)	Consent ledger, no stored images, masked IDs, least-access staff roles.
Fibre isn't available at the address	Pincode check before payment; automatic switch to 5G AirFiber.

A The whole order happens in one WhatsApp chat, from tap to first bill, with no calls

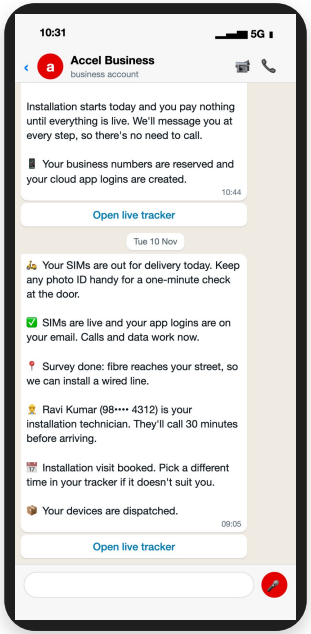

Ordered in one tap

Order placed; secure link to verify

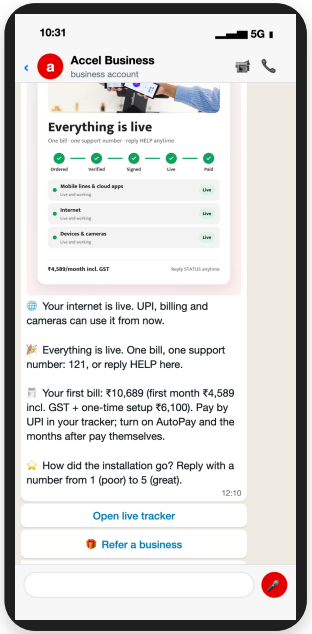

Verified, signed

Installation starts the same day

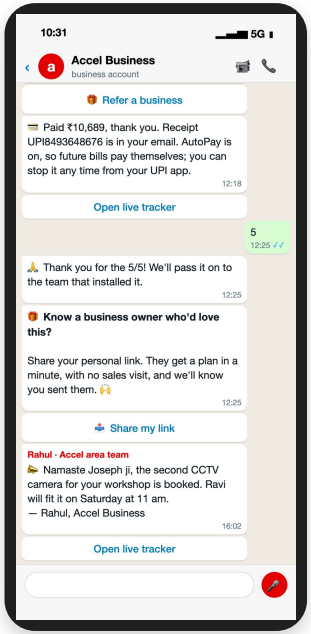

SIMs live, technician named

Numbers, survey, visit booked

Everything live

Status card, first bill, rating ask

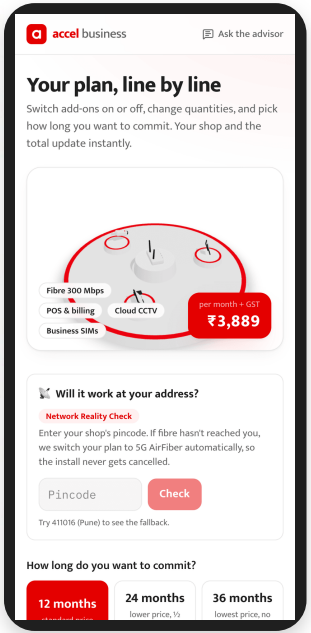

Paid, rated, referred

Salesman's update lands here too

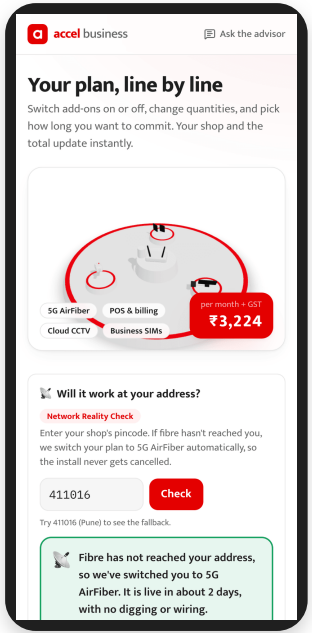

Platform Partner unstop

A On the web: adjust the plan, check the address, give consent, verify and sign

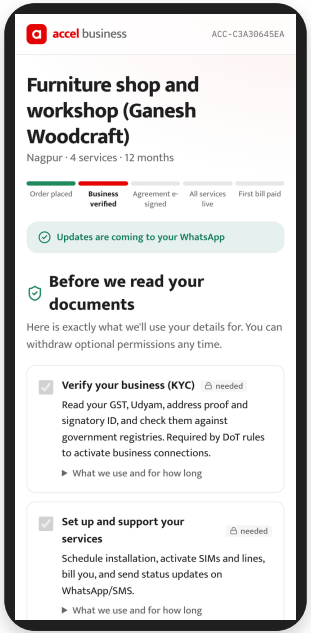

Plan, line by line

Toggles, term, live 3D table

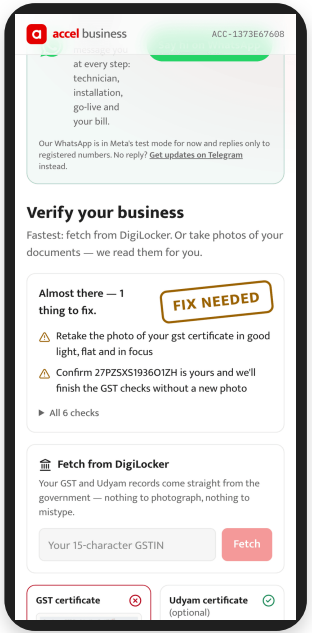

Will it work here?

No fibre: AirFiber instead

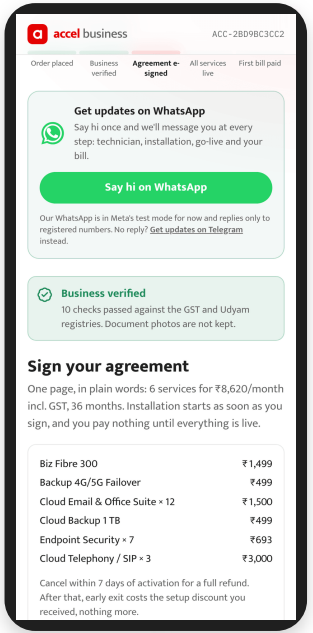

Consent

Per purpose, before reading

Fix, not reject

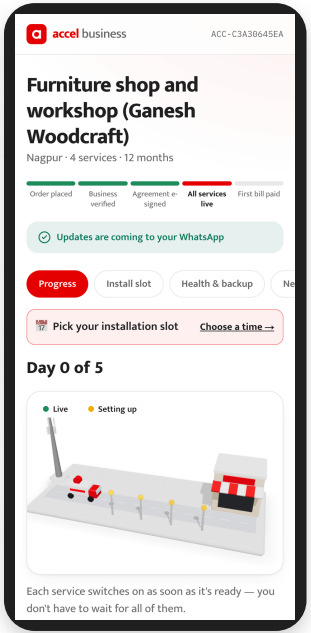

Blurred GSTIN recovered

Verified, then sign

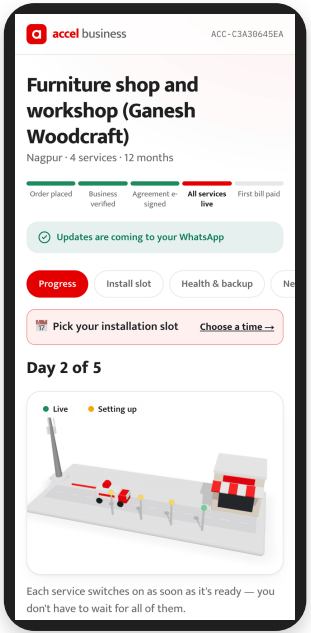

Aadhaar OTP e-sign

A The tracker shows each service going live on its own, and the first bill only when all are live

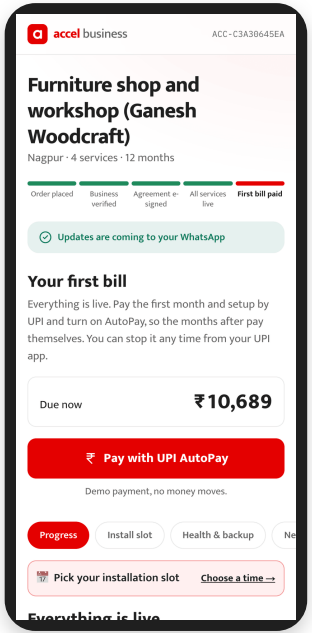

Day 0

Signed; numbers reserved

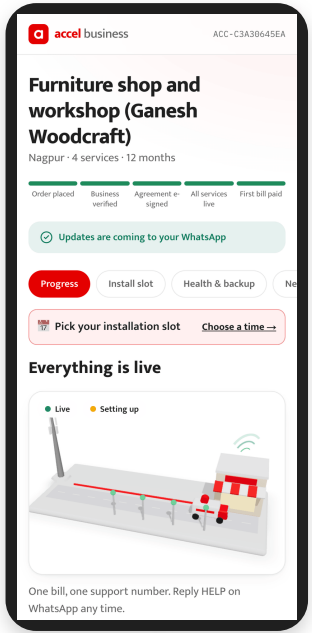

Day 2

SIMs live, technician booked

First bill

UPI AutoPay, nothing earlier

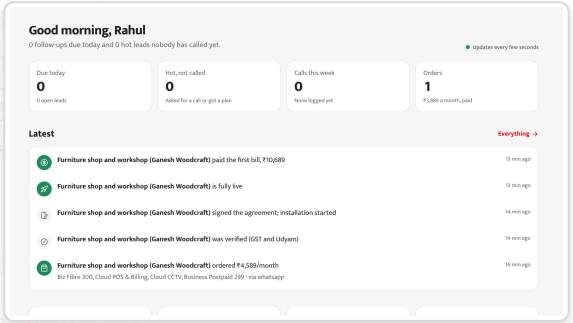

Paid

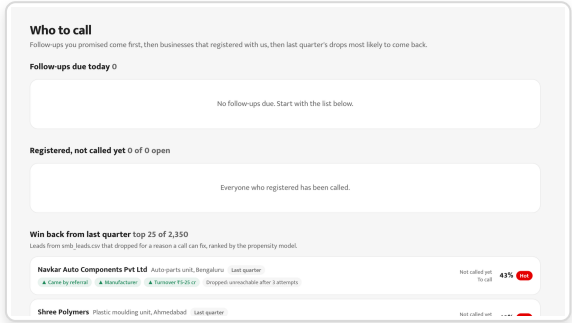

One bill, one number

Platform Partner unstop

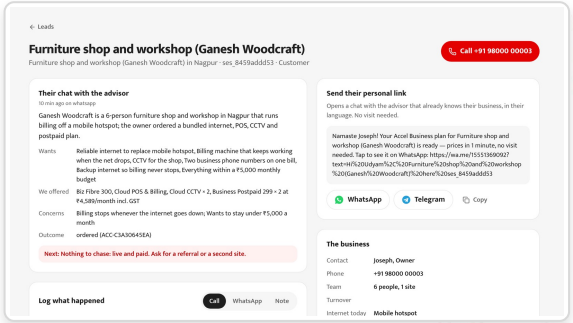

A Staff portal: three roles, real registrations only, every action logged

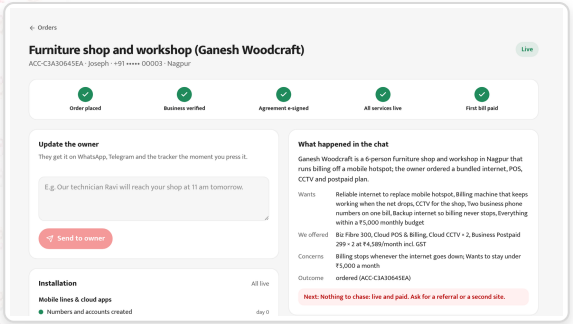

Salesman: today

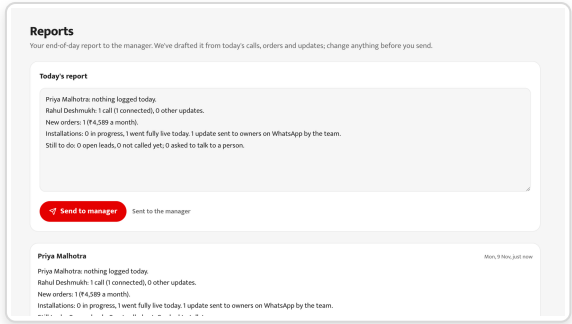

Salesman: who to call

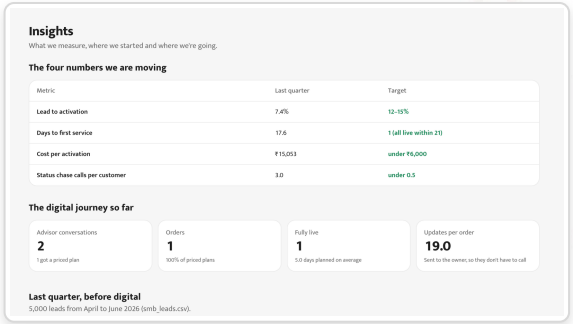

Lead: summary and call log

Order: update the owner

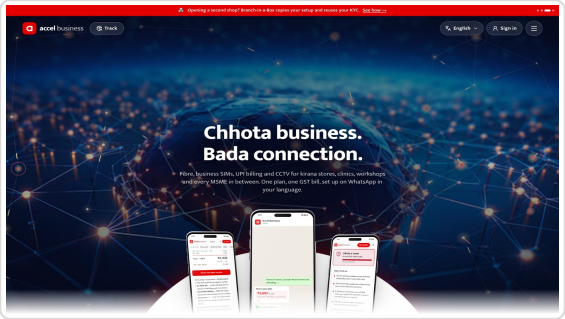

Supervisor: end-of-day report

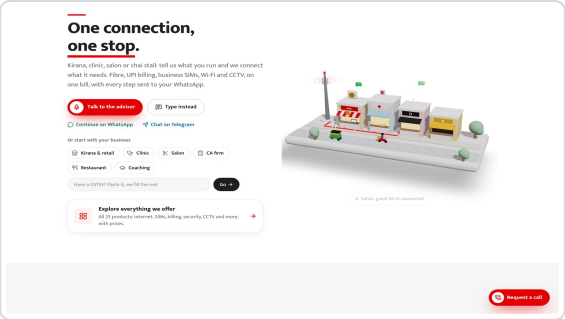

Insights: the four numbers

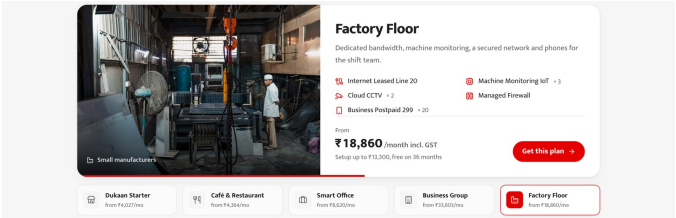

A The website: a 3D street of Indian shops, plans by business type, the advisor in your language

Home: one plan, one bill, on WhatsApp

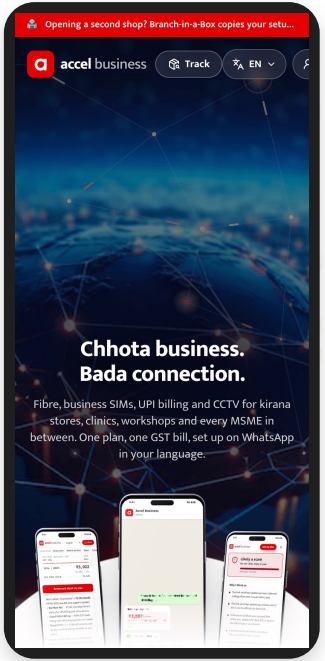

Pick your business, talk or type

Ready plans per segment, priced from the catalogue

Scam Shield, network check, install slots, outage help and Branch-in-a-Box work on the web and in the chat, so the owner keeps one number after go-live.

Phone first, 10 languages, voice
